

PURAFIRE HEATERS

These heavy-duty heaters provide a consistent, clean-burning and fuel efficient source for heat in any type of confinement installation. With near 100% efficiency, these thermostatically operated heaters use less energy to yield greater BTUs with one of the lowest CO outputs in the industry. Choose from two models: the C80-variable output (40,000 to 80,000 BTUH) and the C225 (225,000 BTUH) unit. Each heater is LP or natural gas compatible and can be mounted inside or outside any confinement house.

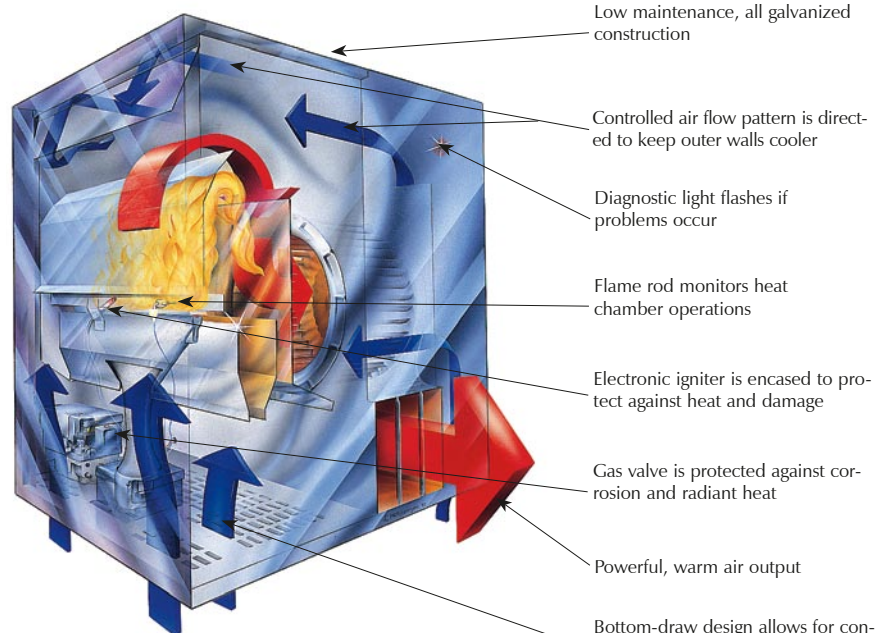

OUT DOOR RE-CIRCULATING KIT

Mounting heaters on the outside of nursery and farrowing buildings saves space and head room in crowded hall ways. Occasionally, snow or rain can cause outdoor mounted heaters to fail when you need them the most. This re-circulating out door heater mounting kit allows you to choose between inside or outside combustion air to keep your heaters functioning properly in all weather conditions.

The "matchless" heater

PuraFire heaters, including all components and sub components, are warranted to be free from defects in material and workmanship for a one-year period from the date of installation.
